DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3 and 5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Clauss et al, 5,251,405, as set forth in the previous Office action.

Response to Arguments

3. Applicant's arguments filed 28 February 2007 have been fully considered but they are not persuasive. Applicant argues that Clauss discloses measuring the cam during grinding to indicate to what extent the cam has been processed, but does not disclose detecting a predetermined lift amount, and using that amount to advance or retreat a rotary grindstone by NC control based on the standard phase of the workpiece previously indexed at the first step. The examiner disagrees. It is the examiner's position that Clauss does provide a first step of detecting a predetermined lift amount, that amount being the final or near final dimension of the cam, and advancing or retreating the grindstone by the NC control based on the standard phase of the workpiece indexed at the first step. That Clauss uses the method to determine when grinding is finished is moot, Clauss uses the same method steps when grinding the same workpiece. The standard phase is the rotation of the cam measured from a starting point, to index the cam periphery during grinding. The predetermined lift

Art Unit: 3723

amount is the length of the cam. As the cam is ground, the length is monitored, until a predetermined lift amount or length is detected, and the grinding wheel is advanced to finish grinding, or retracted to end grinding, based on where the point on the cam surface is positioned relative to the standard phase determined in the first step. One of ordinary skill would recognize that the cam, to be properly ground, must finish grinding at that point, or just beyond, where the grinding was started, to prevent any surface of the periphery from being unfinished. Please refer to column 9, lines 5-67. If applicant has other method steps that would define over the art, they should be claimed.

Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
